(54) RECORDING SHEET

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an ink jet recording sheet indicating an excellent property having meshes not prominent in a printing part while having particular fabric-like feelings, and showing high density printing and ink quick drying properties, and also having no cockling corresponding to even low resolution high speed printing.

SOLUTION: In an ink jet recording sheet made by coating a substrate or impregnating the same with an ink receiving component, the substrate is composed of a non-woven fabric, and the non-woven fabric is made up of a fiber of a fiber diameter of 0.1 denier and 0.8 denier, a cavity volume specified by JIS L1096 of non-woven fabric is 70% and 95%, and 1-10 wt.% of a cellulose fiber is contained in fiber constituting the non-woven fabric. In addition, the substrate has a laminate structure.
